Longevity is the length of time a person lives. Today, many people are interested in living longer and staying healthy as they grow older. Although scientists cannot guarantee a long life, research shows that daily habits, social relationships, and the environment can influence how long people live.

One important factor in longevity is a healthy diet. Eating plenty of fruits, vegetables, whole grains, and other nutritious foods provides the body with essential vitamins and minerals. In contrast, eating too much processed food, sugar, and unhealthy fats may increase the risk of serious health problems. Drinking enough water is also important because it helps the body function properly.

Regular physical activity is another key to a longer life. Activities such as walking, swimming, cycling, and gardening can strengthen the heart, improve balance, and help people maintain a healthy weight. Exercise does not always need to be difficult. Even a short daily walk can provide benefits when it becomes a regular habit.

Mental health also plays an important role in longevity. People who manage stress, get enough sleep, and maintain positive relationships often enjoy a better quality of life. Spending time with family and friends can reduce feelings of loneliness and provide emotional support. Furthermore, learning new skills and keeping the brain active may help people remain mentally sharp as they age.

Interestingly, some communities around the world are known for having many people who live to an advanced age. Researchers often study these communities to understand their lifestyles. However, longevity is not simply the result of one special food or activity. It usually depends on several factors working together, including genetics, healthcare, lifestyle, and living conditions.

In conclusion, living longer is not entirely within our control, but many choices can improve our chances of enjoying a long and healthy life. By developing healthy habits and maintaining strong social connections, people can support their well-being at every stage of life.

Choose the correct answer: A, B, or C.

1. What is the main idea of the text?

A. Why older people should avoid physical activity
B. Factors that can help people live longer and healthier lives
C. Why genetics is the only important factor in longevity

2. According to the text, which foods provide essential vitamins and minerals?

A. Fruits, vegetables, and whole grains
B. Processed foods and sugary snacks
C. Foods that contain unhealthy fats

3. What is one benefit of regular physical activity?

A. It guarantees that people will never become ill.
B. It removes the need for medical care.
C. It can strengthen the heart and improve balance.

4. Why can spending time with family and friends be beneficial?

A. It can reduce loneliness and provide emotional support.
B. It prevents all mental health problems.
C. It means people do not need to exercise.

5. What can be inferred about people who want to improve their longevity?

A. They must follow exactly the same lifestyle.
B. They can benefit from making several healthy lifestyle changes.
C. They should focus only on eating nutritious food.

6. What is the writer's tone throughout the text?

A. Angry and critical
B. Humorous and entertaining
C. Informative and encouraging

7. What is the overall message of the text?

A. Living a long life depends entirely on luck.
B. Healthy habits and social connections can support a longer, healthier life.
C. People who live in certain communities never experience health problems.

8. What is the best title for this text?

A. The Challenges of Growing Older
B. Longevity: Secrets to a Longer, Healthier Life
C. Why Exercise Is the Only Key to Longevity
